

## Course Regime

Course: MEDICAL BIOCHEMISTRY AND MOLECULAR GENETICS

Study Programme: Dental Medicine

Year of the Course: 2

Semester: Winter

Course type: Compulsory

Number of ECTS credits: 9

Lecturer(s): Vita Dolžan, Katarina Trebušak Podkrajšek

Participating Organisational Units (Departments and Institutes): Institute of Biochemistry

Parts (Modules) of the Course: /

Date of Issue: 15.9.2019

## A. General part

### 1. Course objectives

The course aims to give the student an understanding and basic knowledge of life processes and their regulation at the molecular level. It introduces theoretical and practical aspects of basic biochemistry and molecular biology processes. The course deals with special topics concerning the maintenance of cell constituents, body fluids and the processes involved in tissue growth and reproduction. Students will get the knowledge of basic concepts in molecular genetics that will help them to understand the molecular basis of genetic disorders.

### 2. Comprehensive outline of the course organisation

The course regime is prepared in accordance with the Rules for the assessment and grading of skills for the Master's Degree Programs in Medicine and Dental Medicine, accepted on 8 October 2018 (*Rules*).

The course is scheduled in winter semester. The courses are held by lecturers, teaching assistants and technicians in the form of lectures, seminars, tutorials, laboratory courses and problem based learning / guided discussions (DOŠ).

**Lectures** are held three times a week (see published timetable) in Lecture Hall 1 at Faculty of Medicine, Korytkova 2:

Tuesdays 8 AM - 10 AM

Wednesdays 13 AM - 14 AM

Thursdays 10 AM - 12 AM

**Problem based learning, guided discussions** (DOŠ) is organized in small groups in the Seminar at the Institute for Biochemistry, Vrazov trg 2 and last one hour once per week according to the published timetable. During DOŠ the topics from the lectures are discussed in more depth and in the context of clinical correlations. Guided discussions on the lectures and exams' topics are intended to help prepare the students for the partial and final exams. In addition, the results of the partial exams are also discussed.

**Practical laboratory courses & seminars** are held in small groups once per week in the seminars/laboratories at the Institute for Biochemistry, Vrazov trg 2.

**Seminars** are scheduled before the laboratory courses and last for 2 school hours (see published timetable). The seminars are organised as tutorials and student seminars presentations. The schedule for student seminars presentations is published at the beginning of the academic year. Each student must prepare a seminar / presentation on one chosen topic either alone or in pair with a fellow student from the group. Each student (or the pair, respectively) must prepare a written report on the seminar topic, present the seminar orally to their fellow students in the group and answer the questions relevant to the topic during discussion. The written report on the seminar (Word document, a maximum of 800 words, font size 12, line spacing 1.5) should also include short conclusions (e.g., 3 to 4 points) with the most important findings as well as the most relevant figures from the seminar materials (articles). The student must submit this written report to the teaching assistant at least 14 days ahead of the scheduled oral presentation. The teaching assistant reviews the seminar in 7 days. A revised summary must be submitted to the fellow students from the group at least 5 days prior to the oral presentation, so that they can actively participate in the discussion. Oral presentation of the seminar should last 20 minutes at most, and must be accompanied by relevant slides (PowerPoint). The presentation is followed by discussion with the

active participation of all students. During the discussion the teaching assistant also assesses the understanding of the seminar topic by asking additional questions.

**Practical laboratory courses** last for 4 school hours (see published timetable). Only students who are enrolled in the second study year can participate at the practical courses. Student can participate in the practical course if he understands the theoretical foundations and principles of the practical work. All students must actively participate at practical laboratory work. After the end of the practical laboratory course the student has to write the report and answer the questions in the course syllabus book. The student has satisfactorily passed this particular practical course, if he is prepared for the course, has actively participated at practical laboratory work and when the teaching assistant has approved the report by signing.

**The attendance** at the practical laboratory courses & seminars is compulsory and is checked by keeping the attendance list. The exception is warranted in case of illness, drafting in the military, etc., which should be confirmed with an appropriate certificate. Students with a justifiable cause for not participating in the practical laboratory courses & seminars are allowed to substitute at most two missed courses in the current academic year; if they missed more than two courses they need to send the request for permission to substitute more courses to the head of the Institute of Biochemistry. The student will be notified on the further proceedings by e-mail, so the student's e-mail address should be given in the request.

If the student was not allowed to participate at the practical course because failing short written assessment, he or she may replace maximum of one exercise with the oral defense to the assistant at the next exercise.

Exceptionally, a student may take a seminar and an exercise in another group if there is a valid reason for doing so and he or she is allowed by an assistant in the other group. Prior to this (at least one week before substitution), the student must check with the assistant or be able to substitute in the selected group - when checking by email, he / she must indicate his / her group and the group in which he / she wants to substitute for teaching.

### **3. Description of on-going assessment of knowledge and skills**

#### **Written assessment for exercises and seminars**

The readiness for the practical laboratory courses and seminars is assessed by 10-minute written assessment that entails answering 3 short questions, each awarded 1 point (study material: Instructions for the practical laboratory courses at Medical Biochemistry and Laboratory Medicine, articles and seminar summaries). Achieving at least 1.5 points out of 3 (passed) confirms that the student has sufficiently mastered the theoretical foundations and understands the principles of the practical work to be carried out and can participate in the practical course. The student that did not achieve at least 1.5 points (failed) have to demonstrate that they mastered the topic satisfactorily in discussion with the teaching assistant during the next practical course.

Students that failed the short assessment more than twice in the semester must pass a repeated written assessment that includes 5 short essay questions that cover the topics of all seminars (5 short essay questions) and laboratory courses (5 short essay questions). The assessment is held at the end of the semester, usually in the week following the completion of seminars and exercises and lasts 45 minutes.

Similarly, student who failed to complete the laboratory courses before the end of the course must pass the same repeated written assessment before they can be admitted to the final examination.

### **Evaluation of seminars**

The student seminar is assessed according to the rating scale for examinations (see below). Student's oral presentation is graded by the fellow students (40 points) and by the teaching assistant (60 points). The fellow students' grade assesses: the structure of the seminar and the logical sequence (10 points), the manner of presentation (clarity, speech/reading, use of learning tools -10 points), timing of presentations (10 points) and interaction/encouragement of discussion with students (10 points). In addition, the teaching assistant assesses these same points as well as the knowledge of the topic (10 points) and the quality of the first of the written report on the seminar (10) points. If the written report for the seminar is not in accordance with the instructions from the course regime, this lowers the final grade of the seminar for half of a grade. In case of copying the seminars (plagiarism) the final grade is negative. If the assessment is not positive, the student has to defend the seminar topic again in discussion with the teaching assistant.

The final grade of the student seminar may contribute to the overall average grade of the three partial exams, but only when a student passed all short written assessments before the laboratory courses. The grade of the student seminar is added to the average score of the three partial written exams, so that:

- Seminar grade of 10 adds additional 5% to the average score of the three partial written exams
- Seminar grade of 9 adds additional 3%
- Seminar grade of 8 adds additional 1%

### **4. Required conditions for the final examination (Course Exam)**

Student has fulfilled the conditions to take the final exam when the practical laboratory courses and student seminar are completed and approved.

The practical laboratory courses requirement are met when all the practical courses are performed and the reports are signed by the assigned demonstrator and short written assessment are passed. The student seminar requirement are met when there was a successful oral presentation of the seminar and successful discussion that followed.

### **5. Final assessment and examination of knowledge and skills (Course Exam)**

The final exam is written and oral. The exam questions cover the topics of lectures, seminars, laboratory courses, problem based learning and guided discussions. Written examination comprises 40 multiple choice questions and takes 90 minutes. Each question has only one correct answer, which is scored by 1 point. Unanswered question is scored with 0 points, wrong answer or selection of multiple answers (correct and incorrect) is scored with 0 points.

To pass the written exam the student must achieve 60% of all scores. The student has to pass the written exam to be admitted to the oral exam. At the third attempt to pass the exam, the student can be admitted to oral exam regardless of the number of collected points in the written exam.

In the case of testing knowledge or skills, the score scale without the negative deductions is used as given below:

<b>grade</b>	<b>percentage achieved at the examination</b>
unsatisfactory (1 do 5)	0,00 % to 59,99 %
satisfactory (6)	60,00 % to 67,99 %

good (7)	68,00 % to 75,99 %
very good (8)	76,00 % to 83,99 %
very good (9)	84,00 % to 91,99 %
excellent (10)	92,00 % to 100 %

### **Possibility to pass a written exam with partial written exams:**

The student can pass the final written exam with three partial written exams during the semester according to Article 6 of the Regulations for assessment of knowledge and skills for the uniform master's study programmes of medicine and dental medicine; each one consisting of 20 multiple-choice exam questions with one single correct answer. There are no repetitive examination dates for each partial written exams. Students who achieve at least 60% as the sum of the average of the three partial exams and the grade of the seminar presentation of at least 8, can be admitted to the final oral exam without the written exam if they also successfully passed all the laboratory courses.

The final grade of the exam is determined at the oral exam. If the student fails the oral exam he/she is no more exempt from the written examination the next time.

The students who apply for the exam and do not show up for any justifiable reason are considered to have failed the exam.

### **Insights into exam materials**

Exercise and seminar readiness is reviewed as part of an ongoing exercise.

The examination of the results of the partial written examinations is carried out after the partial examination within the DOŠ. Written exams can be accessed by prior agreement with the teacher.

### **Improving rating**

If a student passes the exam with a positive grade but wants to improve the grade (in accordance with the *rules*), he / she must retake the exam by oral examination with the same examiner.

## **6. Other provisions**

### **Examination regulations:**

Students are obliged to observe ethical principles and the general rules of the examination regulations, set out in Article 34 of the *Regulations*, during written or oral exams.

Before the exam, the student has to identify him/herself with the photo identification document. When taking any type of written exams or assessments, the student can only bring the pencil, rubber, a basic calculator and an identification document. Silenced mobile phones and other electronic devices enabling taking pictures, as well as food, drinks and other personal belongings should be left in the student lockers or at the assigned spaces. During the exam, any communication between the students or any copying of the exam is forbidden. The students can start writing the exam only when allowed by the assigned lecturer or teaching assistant. Any type of exams and assessments can only be taken by the student him/herself and for any other arrangement both parties will be severely sanctioned. The students are obliged to leave all exam materials with the lecturer or teaching assistant immediately after finishing the exam.

### **Violation of the examination regulations:**

The violation of the examination order is determined by the supervising lecturer or teaching assistant. In the event a student fails to follow examination regulations, described in Article 34 of

the regulation, he or she shall be immediately prohibited from further examination in accordance with Articles 35 and 37 of the regulation. The exam shall be assessed unsatisfactory (5). Any unauthorized acquisition of exam materials by the students shall be considered as a disciplinary offense and sanctioned according to the Article 37 of the regulation.

#### **Exam before the committee:**

Exam before the committee is conducted in accordance with the regulation. It is composed of the written and oral part. When taking the exam for the fourth and fifth time, the student has to take the oral exam before a committee consisting of at least three members; an examiner and two members. In the case of the fifth examination, one member of the committee is from another department or institute of the Faculty of Medicine. For taking the fifth examination, a student must submit a formal written request to the Student Affairs Committee of the UL MF. In the case the request is approved, we highly advice the student to contact the course lecturer for consultations regarding the exam topics before applying for the exam.

#### **7. Fundamental study material and Supplement reading**

- Marks DB et al., Basic Medical Biochemistry, A Clinical Approach, 2013 (I)
- Devlin TM, Textbook of Biochemistry with Clinical Correlations, new editions (I)
- Instructions for the practical laboratory courses at Medical Biochemistry and Laboratory Medicine 2017, 3<sup>rd</sup> edition (I)
- Publications on the selected topics of the student seminars for 2019/2020 (S)

## 8. Exam topics, clinical presentations and skills

1. Transmission of genetic information: DNA replication	<ul style="list-style-type: none"> <li>· Fundamental mechanisms of DNA replication, enzymes and proteins in regulation of DNA replication</li> <li>· DNA replication in prokaryotes</li> <li>· Genomic DNA replication in eukaryotes</li> <li>· Replication of telomeric DNA</li> <li>· Mitochondrial DNA replication</li> <li>· Accuracy of DNA replication</li> <li>· DNA repair during replication</li> <li>· Differences in prokaryotic and eukaryotic DNA replication in medical context</li> <li>· DNA replication inhibitors in medical context</li> </ul>	<ul style="list-style-type: none"> <li>• Lecture</li> <li>• T: Marks DB in sod., Basic Medical Biochemistry, A Clinical Approach, 2013 or Devlin TM, Textbook of Biochemistry with Clinical Correlations, 2011</li> <li>• I: Isolation and characterization of genomic DNA from blood</li> </ul>

36. Metabolism of nucleotides	<ul style="list-style-type: none"> <li>·Biosynthesis of the nucleotides, substrates</li> <li>·Schematic overview of the biosynthesis of the ribonucleotides</li> <li>·PRPP biosynthesis of the ribonucleotides <i>de novo</i> and in recycling</li> <li>·Biosynthesis of the deoxynucleotides</li> <li>·Schematic overview of degradation of ribonucleotides and deoxyribonucleotides</li> <li>·Regulation of metabolism of nucleotides</li> <li>·Enzyme deficiency in metabolism of nucleotides</li> <li>·Inhibitors of the deoxyribonucleotides synthesis and their role in medicine</li> </ul>	<ul style="list-style-type: none"> <li>• Lecture</li> <li>• T: Marks DB in sod., Basic Medical Biochemistry, A Clinical Approach, 2013 or Devlin TM, Textbook of Biochemistry with Clinical Correlations, 2011</li> </ul>

## 9. Other information

The exam procedure and application process is defined in the *regulation*. A student, who applied for the exam but later does not take the exam or withdraws from the exam, shall be considered as having failed the exam. There is no need to apply for partial written exams.

### **Regulations at the laboratories for the practical laboratory course**

For safety reasons, the students must follow the laboratory safety rules. Clothes and bags must be stored in the lockers. No food or drinks are allowed in the laboratories. Students must wear laboratory coats while performing experiments. In certain exercises, students should wear the gloves they receive in the classroom.

E-mail questions will be answered during business hours.
