

## Course Regime

Course: **Pathophysiology – new approaches, broadening and interconnecting**

Study Programme: **Medicine**

Year of the Course: **3**

Semester: **Winter**

Course type: **Elective**

Number of ECTS credits: **10**

Lecturer(s): **Samo Ribarič**

Participating Organisational Units (Departments and Institutes):  
**Institute of Pathophysiology ULFM**

Date of Issue: **25.9.2019**

## **A. General part**

### **1. Course objectives**

The students learn how to use their pathophysiologic knowledge to analyse complex pathologic processes involving different organ systems of the following selected clinical cases:

- complex analysis of respiration status in patients with COPD, cor pulmonale and heart failure;
- physiology of placebo effects;
- pathophysiology of nerve-muscle transmission;
- pathophysiology effects of selected toxins;
- pathophysiology of complications following heart transplant or mechanical ventricular assistance
- psychosomatic disorders.

Learning outcomes:

- Students obtain deeper knowledge in selected fields of pathophysiology by using special approaches to active learning. They improve their understanding of interconnection of different organ systems during disease.
- Students strengthen the idea that understanding the mechanisms of the disease is the basis of rational prevention, diagnosis and treatment of disease.
- Students further develop the pathophysiologic way of thinking which accentuates the importance of knowing the etiopathogenesis of patient's disease. They develop the ability for professional debate, formulating their opinion and defending it in public.

### **2. Comprehensive outline of the course organisation**

The Course will be implemented in compliance with the REGULATIONS FOR ASSESSMENT OF KNOWLEDGE AND SKILLS FOR THE UNIFORM MASTER'S STUDY PROGRAMMES OF MEDICINE AND DENTAL MEDICINE.

The time table of seminars – tutorials, discussions, problem based learning sessions and lectures is agreed with the enrolled students and will be published on the Institutes web-page and sent to the students' e-mail address.

The student needs to have a minimal 60% attendance to fulfil his course obligations. The fulfilment of course obligations is an obligatory prerequisite for taking the final course exam.

### **3. Description of on-going assessment of knowledge and skills**

Oral coursework presentation and participation in discussion.

### **4. Required conditions for the final examination (Course Exam)**

The student needs to have a minimal 60% course attendance.

Students that had a 60% or more course attendance and got a pass grade during assessment of knowledge and skills during the course have fulfilled all of their course obligations and are eligible for the final exam grade.

## **5. Final assessment and examination of knowledge and skills (Course Exam)**

The final course exam is in compliance with the REGULATIONS FOR ASSESSMENT OF KNOWLEDGE AND SKILLS FOR THE UNIFORM MASTER'S STUDY PROGRAMMES OF MEDICINE AND DENTAL MEDICINE.

Students that had a 60% or more course attendance and got a pass grade during assessment of knowledge and skills during the course have fulfilled all of their course obligations and are eligible for the final exam grade.

The final, course exam is a written exam only, consisting of 10 MCQs and takes 30 min. Each correctly answered MCQ is awarded 1 point, there are no deductions for incorrect answers.

## **6. Other provisions**

Article 34. of the REGULATIONS FOR ASSESSMENT OF KNOWLEDGE AND SKILLS FOR THE UNIFORM MASTER'S STUDY PROGRAMMES OF MEDICINE AND DENTAL MEDICINE applies to interim and final, course exams.

Students with special needs can be granted up to 50% extra time to finish their interim and final course exams.

## **7. Fundamental study material and Supplement reading**

Course material (copies of lectures and relevant papers) will be provided to students on time for interim and final course exams.

## **8. Exam topics**

- complex analysis of respiration status in patients with COPD, cor pulmonale and heart failure;
- physiology of placebo effects;
- pathophysiology of nerve-muscle transmission;
- pathophysiology effects of selected toxins;
- pathophysiology of complications following heart transplant or mechanical ventricular assistance
- psychosomatic disorders.

## **9. Other informations**

### **B. Elective Courses** (*considered as Elective Course Announcement*)

#### **1. Participating main and guest lectures**

Fajko Bajrovič, Maja Bresjanac, Uroš Kovačič, Tomaž Marš, Samo Ribarič, Dušan Šuput

#### **2. Estimated time period in the semester**

From second half of May to first half of June.

#### **3. Maximum number of students for the elective course (if the number of students able to attend the course is limited)**

15.

#### **4. Please specify if the elective course is available in English for incoming international students (Erasmus + and others). Please specify any additional conditions in the case that the elective course is available for visiting students.**

Elective course is available in English for incoming international students (Erasmus + and others).
