

Course Regime

Course: Physiology

Study Programme: Medicine

Year of the Course: 2nd

Semester: whole year

Course type: Compulsory

Number of ECTS credits: 17

Lecturer(s): prof. dr. Žarko Finderle, prof. dr. Ksenija Cankar, izr. prof. dr. Helena Lenasi

Participating Organisational Units (Departments and Institutes): Institute of Physiology

Date of Issue: 15. 9. 2020

A. General part (*applies to compulsory and elective courses*)

1. Course objectives

The course in physiology is based on the lessons learned from biophysics, biochemistry, biology and normal morphology. The student learns about the normal functioning of the organism. She or he acquires the basic concepts in physiology and learns the principles of measurements in physiology. She or he is encouraged in accordance with the concepts, to interpret the results of the measurements. The aims of physiology course are that a student develops the critical thinking and ability of solving problems independently and it encourages the habit of self-education.

2. Comprehensive outline of the course organisation

All notifications about physiology class for students of the Medicine and Dental Medicine program will be published on the Physiology sub-site on the website of the Faculty of Medicine and in online classroom.

2.1 LECTURES:

The terms and titles of lectures will be published on the Physiology sub-site on the website of the Faculty of Medicine and in the online classroom.

2.2 TUTORIALS AND INSTRUCTIONS FOR TUTORIALS:

Tutorials and instructions for tutorials are mandatory. The terms of tutorials and instructions for tutorials are published together with the schedule of lectures. Student performs tutorials in groups, which are determined in advance. The list of groups will be announced on the website of the Faculty of Medicine on the site of Physiology and will be valid for all subjects of the second year. When a student is unable to perform a tutorial in his own group because of illness or other justifiable reason, he can do it with another group, but only after prior arrangement with the teaching assistant. In each semester, a student can perform one exercise, at which he was not present for justifiable reasons, during the repetitive exercises. A student who is unreasonably absent from the tutorial cannot replace the tutorial. The tutorial is done when the following conditions are accomplished: standby, active participation, skills acquired, and passed protocol.

2.3 SEMINARS:

Each student must complete one seminar per semester.

Instructions for preparing a seminar:

A student or group of students prepares the content of the assigned seminar on 1 slide in a .ppt format. The slide must present a shortened title and a maximum of 1 diagrams and 5 paragraphs for the subject of the seminar, font size at least 24. The footnotes should include the names of the students. Oral presentation of the seminar lasts for 15 minutes and includes a short presentation (up to 5 minutes) and a discussion where the seminar leader interrogates the students. Students submit a .ppt file (in Office 2003 version and not newer !!) to the seminar leader by email no later than 3 working days before the seminar. The file should have title with the name of one of the seminarists name and a seminar physio (example: JKovac_seminar_fizio.ppt). Exchange of individual students among groups is possible, but only after prior arrangement with the leader of the seminar. A student who wants to replace a group must find the appropriate replacement for himself. Topics of seminars will be published on the Physiology sub-site on the website of the Faculty of Medicine and on online classroom.

3. Description of on-going assessment of knowledge and skills*

3.1 PARTIAL EXAMS:

Student must have completed all three mandatory partial exams. The first partial exam covers the content of the following tutorials: Measurements, Blood, Nerve and Muscle, and ECG, the second partial exam covers the content of the tutorials: Respiration and the Respiratory Function of the Blood, Blood Pressure, Heart and Vessels and the third partial exam covers the tutorials: Special Senses, Neurophysiological Measurements, Metabolism and Kidney.

An absence in the mandatory partial exams must be apologized in the secretariat of the Institute of Physiology. Before each (except for the first) exam, there is a repetitive partial exam, which can be attended by students, who did not reach an average of 60,00 % of the three partial exams during the year or who did not take part in the partial exam from justified reasons during the year.

Student who wants to do a repetitive partial exam must apply by an e-mail addressed to the secretary of the Institute of Physiology no later than three working days before the deadline. Repetitive partial exam covers the contents of all tutorials.

3.2 SEMINARS:

All students in the group who are attending a seminar must be prepared for the seminar. They must answer to the questions that are similar to the exam questions. Student's appropriate knowledge is a prerequisite for the seminar approval. The seminar is evaluated with done/not done.

4. Required conditions for the final examination (Course Exam)

In accordance with the Paragraph 23 of the Rules, prerequisites for attending the exam are:

- all tutorials must have been attended and approved,
- an average of three partial exams must be at least 60,00 %,
- approved seminars.

5. Final evaluation of knowledge and skills (Course Exam)**

Student knowledge is evaluated by a written test exam (multiple choice questions). Students which passed the written exam must then pass the oral part of the exam.

Evaluation of the written examination:

- For a positive result of a written examination, at least 60,00 % of points are required.
- A positive evaluation of the written examination is a prerequisite to attend an oral examination, except for the third to the fifth/sixth attempt of written examination, where every student has the right to attend the oral examination. In the fourth, fifth and sixth performance of the exam, the oral part of the examination is conducted in front of a commission. The Commission exam is conducted in accordance with the Rules on the assessment and Assessment of knowledge and skills of a uniform master's program in medicine and dental medicine.
- A bonus is given to the result of the written examination. Bonus is a positive part of the average grade of three regular partial exams, weighted by one third. The bonus is only given in the current academic year. Example: if the student receives an average grade of 90 % in partial exams, the positive part of the assessment is 30 % ($90 \% - 60 \% = 30 \%$). Dividing the positive part of the assessment by 3, we get a value of a bonus which in this case comprises 10%. The received bonus (10 %) is added to the result that the student obtained in the written examination. For example: when the result of a written exam is 60 %, this bonus improves the student's mark by 10 %; the final result of the written exam (after taking into account also the student's bonus) is 70 %. The bonus is added to the result of the written exam only when the result of the written exam is equal to or higher than 60,00 %.

Applications and check-outs for written exams must be managed over the VIS Information System.

Students must apply for inspections of written exams to the secretary of the Institute of Physiology by an e-mail no later than seven days after the exam. Registered students will be notified via email of the exact date of inspections.

Written exams are available for inspections only after oral examinations have been completed. Inspections of the written exams are not intended to reveal the correct answers. For such or similar questions that relate to the professional content of the course, pedagogical workers are available throughout the year during their office hours (after prior announcement).

During inspection of written exams, in addition to his exam, the student gets a table, which shows whether he answered the question correctly or incorrectly. Student must check the consistency of his answers from the exam and table. If he wants to have a personal interview with the teacher, student must fill in a form in which he writes a consecutive number of exam question, as well as comments / objection / explanation why he thinks that the question was misjudged. The teacher then contacts the student via email, where he provides an explanation. They can also arrange an individual interview.

6. Other provisions

Article 34 of the Rules on the Verification and Assessment of Knowledge and Skills for the Uniform Master's Study Program Medicine and Dental Medicine shall apply.

Students with special needs must provide a certificate and confirmed status to the secretariat of the Institute of Physiology at the beginning of the school year (not later than 14th October or at the latest 14 days after they have acquired their status).

***In the case of a bad epidemiological situation related to covid-19, the terms and conditions of on-going assessment of knowledge and skills (partial exams) in the Course Regime may be changed. Due to eventual epidemiological restrictions, the partial exams can be held online. Respectively, the required conditions are that partial exams must reach at least 60,00 %, In this case, the bonus will not be considered. Repetitive partial exam will be cancelled.**

****In the case of a bad epidemiological situation related to covid-19, the final evaluation of knowledge and skills (course exam) may be changed. In accordance with current epidemiological recommendations, the exam can be held online. In this case, the bonus will not be considered.**

7. Fundamental study material and Supplement reading

• Textbooks:

- John E. Hall PhD: Guyton and Hall Textbook of Medical Physiology, 13e: chapters in nervous physiology
- Bruce M. Koeppen & Bruce A. Stanton: Berne & Levy Physiology, 6e: all chapters except nervous system physiology
- Štrucl M. Fiziologija živčevja. Ljubljana: Medicinski razgledi, 1999

• Extracts from lectures: e-classroom

• Tutorial instructions

8. Exam topics, clinical presentations and skills

EXPLANATION OF ACRONYMS:

L (Lectures); **S** (Seminars); **T** (Textbook, chapter from a book, instructions for preclinical practical courses, article); **PPC** (Preclinical Practical Courses); **OFS** (Other Forms of Study)

SUBJECT	SUBJECT DETAILS	LITERATURE
Principles of physiology		
Homeostasis	Maintaining constant internal environment. Regulated quantities, overview. *Modern description with mathematical laws, systems theory, cybernetics.	L: Homeostasis. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Homeostasis: Volume and Composition of Body Fluid Compartments.
Transport mechanisms – overview	Intensive and extensive quantities in physiology, description of energy law. Capacity, relations between intensive and extensive quantities (volume – pressure, heat – temperature, charge – voltage, amount of substance – concentration). Flow, changes of extensive quantities in time (diffusion, convection). Currents, flows and driving forces (thermal flux – diffusion, convection, radiation, evaporation, volume flow – convection, substance flow – convection, diffusion, electric current, solutions – separately). Flow through elements, arranged in parallel vs. in series, effect of resistance. Similarities between different types of flow: thermal flux, electric current (Kirchoff's laws), flow of substance, volume – profiles of temperature, voltage, concentration (partial pressures), pressure.	L: Transport mechanisms – overview.
Thermodynamics of biological solutions	Thermodynamic equilibrium for two or more compartments. Chemical potential and description of multiple forces on a particle. Equilibrium systems: electrochemical equilibrium, osmotic equilibrium, Henry's law. *Non-equilibrium systems and shift of substances between compartments (different ions, solute and solvent). *Dissipation function.	L: Thermodynamics of biological solutions.
Systemic analysis in physiology	Description of a system, state of a system. Static response of a system, transition between states (water container as an analogue of arterial system). Types of disturbances (short-term, long-term), types of responses (PID...). Static stability of a system.	L: Systemic analysis in physiology (M).
Regulation in biological systems	Control system and its parts (receptor, afferent branch, control centre, efferent branch, effector). Characteristics of a control system. Amplification of a system. *Dynamic stability of a system. *The problem with a reference value. Types of regulation (closed-loop, open-loop, program control, adaptable systems).	L: Regulation in biological systems.

Transport of substances across cell membrane	Facilitated diffusion, competitive inhibition, allosteric inhibition, cooperativity: demonstration with diagrams. Secondary and primary active transport. Ion channels and transporters.	L: Transport of substances across cell membrane. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Principles of Cell and Membrane Function.
Transport of water, osmosis	Colligative properties of substances and physiological influences. Osmosis: general features – tonicity, osmolarity. Ideal systems, non-ideal systems, reflection coefficient. *Regulation of cell volume.	L: Transport of water, osmosis. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Principles of Cell and Membrane Function. - Homeostasis: Volume and Composition of Body Fluid Compartments.
Electrophysiology		
Membrane potential	Example of a membrane that is permeable only for one type of cations. Example of a membrane that is permeable only for one type of cations and anions, but non-permeable for other anions. Donnan's equilibrium (where in the body), impact on a membrane potential, osmotic forces. General example: membrane is permeable for two types of cations – electrochemical non-equilibrium. Goldman's equation (of a constant field). *Electrical model of a cell membrane.	L: Membrane potential. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Principles of Cell and Membrane Function. - Homeostasis: Volume and Composition of Body Fluid Compartments.
Electrical communication (localized and travelling potentials)	Measuring of electrical phenomena. Excitability and types of stimuli and responses (local response, action potential). Types of channels according to excitability (depolarizing and repolarizing currents). *Classic description (according to Hodgkin and Huxley), static description (patch clamp). Passive response of cell membrane to stimulation, transient phenomena. Local response, conduction with decrement (for example electrotonic potential). *Spreading of excitation, travelling of an interference along a cable (hose). *Electrical stimulation: effects of an electrical current depending on direction of the current, amplitude and duration of a stimulus, shape of current pulses and frequency.	L: Electrical communication (localized and travelling potentials). T: Berne RM, Levy MN. Physiology or Principles of physiology: - Generation and Conduction of Action Potentials.
Muscle		
Skeletal muscle: macroscopic description	Observing and defining contractions (concentric, eccentric, isometric, isotonic contraction). Physical quantities describing mechanical functioning of a muscle (length, velocity, tension) and muscle's characteristics (muscle force and power). Types of muscle activation (twitch, tetanus, contracture). Mechanical characteristics of skeletal muscle. Force – velocity relationship. Length – tension relationship (isometric contraction).	L: Skeletal muscle: macroscopic description. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Skeletal Muscle Physiology.
Microscopic description,	Sarcomere as a basic unit of contractile apparatus, its elements and	L: Microscopic description, excitation-

excitation-contraction coupling	<p>function.</p> <p>Role of cross-bridges in contraction.</p> <p>Activation of contractile apparatus with calcium and sensitivity to calcium.</p> <p>Excitation-contraction coupling.</p>	<p>contraction coupling.</p> <p>T: Berne RM, Levy MN. Physiology or Principles of physiology: - Skeletal Muscle Physiology.</p>
Energetics of muscle contraction	<p>Energy sources and metabolism.</p> <p>*Heat discharge during contraction.</p> <p>*Energy consumption depending on work done, load, contraction velocity and type of activation.</p>	<p>L: Energetics of muscle contraction.</p> <p>T: Berne RM, Levy MN. Physiology or Principles of physiology: - Skeletal Muscle Physiology.</p>
Smooth muscle	<p>Structural differences compared to skeletal muscle (size, contractile apparatus, cell-to-cell contact, sarcoplasmic reticulum), transfer of force.</p> <p>Smooth muscle contraction, mechanical characteristics and mechanism of activation.</p> <p>Ways of transducing an activation-triggering signal on the sarcolemma.</p> <p>Integration of contractile activity of smooth muscles (organization on a basis of innervation, neurotransmitters)</p> <p>Electromechanical relationships in smooth muscle.</p>	<p>L: Smooth muscle.</p> <p>T: Berne RM, Levy MN. Physiology or Principles of physiology: - Smooth muscle.</p>
Functioning of muscles in the body	<p>Activation of body muscles, mechanisms for modulation of the force of contraction.</p> <p>Transfer of force at joints, relationship of torque to muscle insertions, joint angle and characteristics of muscle.</p> <p>*Functioning of muscles at more than one joint and in different directions at one joint, effect of synergistic muscles.</p>	<p>L: Functioning of muscles in the body.</p> <p>T: Berne RM, Levy MN. Physiology or Principles of physiology: - Skeletal Muscle Physiology.</p>
Circulation – heart		
Overview, divisions	<p>Elements of circulation and their function.</p> <p>Distribution of cross-sectional area, velocity, volume of blood and blood pressure along the cardiovascular circuit.</p> <p>Flow through vessels arranged in series versus in parallel.</p> <p>*Preservation of blood volume and consequences for functioning of a closed cardiovascular circuit.</p>	<p>L: Overview, divisions.</p> <p>T: Berne RM, Levy MN: Physiology or Principles of Physiology: - Overview of Circulation.</p>
The cardiac pump: the cardiac cycle	<p>Cardiac chambers and their function (structure of ventricle wall, structure of cardiac valves, pericardium).</p> <p>The cardiac cycle, description with a synoptic picture.</p> <p>Mechanism of function of cardiac valves and heart sounds.</p> <p>Measuring (ultrasound, mechanophonogram).</p>	<p>L: The cardiac pump: the cardiac cycle.</p> <p>T: Berne RM, Levy MN: Physiology or Principles of Physiology: - Elements of Cardiac Function.</p>
Electrical activity of the heart – types of potentials, conduction velocity, excitability	<p>Importance of conduction system for the cardiac function.</p> <p>Description of monophasic action potential for fast-response and slow-response fibers.</p> <p>Ionic basis for fast-response and slow-response fibers (functioning of sodium channel and calcium channels).</p> <p>Conduction of cardiac action potential and factors that affect conduction velocity.</p> <p>Excitability, its role, mechanisms.</p> <p>Automaticity and mechanisms.</p>	<p>L: Electrical activity of the heart – types of potentials, conduction velocity, excitability.</p> <p>T: Berne RM, Levy MN. Physiology or Principles of physiology: - Elements of Cardiac Function.</p>
Normal excitation of the heart, ECG	<p>Electrocardiogram, what information do we get.</p> <p>Description of ECG waves and what they represent.</p> <p>*Distribution of potentials in a volume conductor and principles of spreading of electrical currents.</p> <p>Scalar and vector ECG recording.</p>	<p>L: Normal excitation of the heart, ECG.</p> <p>T: Berne RM, Levy MN. Physiology or Principles of physiology: - Elements of Cardiac Function.</p>

	ECG recording, leads, determining the electrical axis (preclinical practical courses).	
Cardiac muscle cell, energetics of heart	Structure of cells (myocytes), tissue (myocardium) and function. Maximal (isometric) force – length relationship, Starling's law. Homeometric and heterometric regulation. Contraction velocity – load relationship. Excitation-contraction coupling, calcium cycling. Contraction mechanics, preload, afterload. Analogy between muscle fibre and ventricle. Contractility. Energy consumption in the heart, factors that influence it.	L: Cardiac muscle cell, energetics of heart. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Cardiac Muscle. - Elements of Cardiac Function.
Control of cardiac function, effect of heart rate	Definition of cardiac output, heart index, units. Control of heart rate, normo-, tachy- and bradycardia, heart rate variability. Characteristics of pacemakers. Effects of autonomic nervous system: effect of sympathetic input and parasympathetic input, neurotransmitters and speed of action, course of fibres and lateralization. Afferent influences on cardioregulatory centre; brain cortex, brainstem and autonomic reflexes. Baroreceptive reflex, Bainbridge reflex and atrial volume receptors, ventricular receptors, chemoreceptor reflex, stimulation of visceral organs. Respiratory sinus arrhythmia.	L: Control of cardiac function, effect of heart rate. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Elements of Cardiac Function. - Regulation of the Heart and Vasculature.
Control of cardiac function, effects of preload, afterload and contractility	Regulation of diastolic ventricular filling and effect of filling pressure, ventricular compliance, filling time, mitral valve resistance, presence of atrial contraction and previous filling. Regulation of end-systolic volume, effect of geometrical factors and intrinsic features. Denervated heart, features and when they occur. Starling's law, experiments on an isolated heart (changing of ventricular filling and load). Homeometric regulation, induced by heart rate or load. Extrinsic control of cardiac function (nervous and humoral factors) and changing of contractility. Cardiac function curves.	L: Control of cardiac function, effects of preload, afterload and contractility. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Regulation of the Heart and Vasculature.
p-V diagram	Regulation of cardiac function, effects of filling, load and contractility.	L: p-V diagram of the heart. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Elements of Cardiac Function.
Circulation – vasculature		
Hemodynamics	Use of conservation laws to describe blood flow (Bernoulli equation). Flow through rigid tubes, laminar flow and Poiseuille's law. Deviations from Poiseuille's law in different vessels, demonstration with flow – perfusion pressure relationship. Turbulent flow, description and criteria (Reynold's number). Flow through elastic tubes, definition of compliance. Effect of compliance of arterial and venous system on shift of blood between them. "Windkessel" concept, pulsatile flow.	L: Hemodynamics. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Properties of the Vasculature.
Arteries (pulsations,	Arterial compliance and effect on arterial blood pressure, changes	L: Arteries (pulsations, compliance).

compliance)	<p>associated with ageing.</p> <p>Importance of compliance for energetic effectiveness of a system.</p> <p>Factors that determine mean arterial pressure and pulse pressure.</p> <p>Factors that determine rise and falling of arterial pressure.</p> <p>*Characteristics of pulse and appropriate physical quantities that determine them.</p> <p>Changing of pulse wave amplitude on periphery and causes.</p> <p>Pulse wave velocity, measuring, importance.</p> <p>Measuring arterial blood pressure.</p>	<p>T: Berne RM, Levy MN. Physiology or Principles of physiology:</p> <ul style="list-style-type: none"> - Properties of the Vasculature.
Veins (and collapsible vessels)	<p>Description of flow through collapsible vessels.</p> <p>Effect of gravitational forces on blood flow (redistribution of blood, vascular resistance).</p> <p>Venous valves, anatomical and functional.</p> <p>Accessory pumps in circulation.</p> <p>Flow of lymph and problems with driving forces.</p>	<p>L: Veins (and collapsible vessels).</p> <p>T: Berne RM, Levy MN. Physiology or Principles of physiology:</p> <ul style="list-style-type: none"> - Properties of the Vasculature.
Microcirculation (exchange, regulation)	<p>Functions of endothelial and smooth muscle cells and their coupling (mediators).</p> <p>Elements of microcirculatory network (resistance vessels, vessels for exchange of substances, capacitance vessels, bypass vessels).</p> <p>Microvascular dynamics and influences (hemorheologic properties of blood, flow-induced vasodilation, autoregulation).</p> <p>Microcirculatory transport, diffusion, substance clearance.</p> <p>Filtration – reabsorption and factors that influence them (Starling's law of capillary exchange).</p> <p>Local regulation of microcirculatory transport (myogenic and metabolic).</p> <p>Active and reactive hyperaemia.</p> <p>Extrinsic regulation of microcirculatory transport, vascular reflexes.</p>	<p>L: Microcirculation (exchange, regulation).</p> <p>T: Berne RM, Levy MN. Physiology or Principles of physiology:</p> <ul style="list-style-type: none"> - Properties of the Vasculature.
Regulation of cardiac output (venous return = cardiac output)	<p>Characteristics of venous system that influence blood flow.</p> <p>Concept of mean circulatory pressure and venous return, advantages and disadvantages.</p> <p>Vascular function curves and factors that influence them.</p> <p>Coupling between the cardiac and vascular function curves and regulation of cardiac output (Guyton's analysis).</p>	<p>L: Regulation of cardiac output (venous return = cardiac output).</p> <p>T: Berne RM, Levy MN. Physiology or Principles of physiology:</p> <ul style="list-style-type: none"> - Integrated Control of the Cardiovascular System.
Regulation of arterial pressure	<p>Arterial pressure values and changes associated with ageing.</p> <p>What determines arterial pressure?</p> <p>Definition of arterial pressure with filling of arterial system.</p> <p>*Impact of cardiac output and peripheral resistance, analysis with flow-pressure diagram.</p> <p>Regulation of arterial blood pressure and circulatory reflexes.</p> <p>Circulatory response to erect posture and to exercise.</p>	<p>L: Regulation of arterial pressure.</p> <p>T: Berne RM, Levy MN. Physiology or Principles of physiology:</p> <ul style="list-style-type: none"> - Properties of the Vasculature. - Regulation of the Heart and Vasculature. - Integrated Control of the Cardiovascular System.
Measuring the cardiac output	<p>Methods for measuring based on a single beat: Fick's principle with measurement of oxygen consumption, indicator dilution method.</p> <p>*Methods for measuring time course (thermodilution method, electromagnetic flowmeter, volume conductometry).</p> <p>Measuring volumes of heart chambers with diagnostic imaging.</p>	<p>L: Measuring the cardiac output.</p> <p>T: Berne RM, Levy MN. Coupling of ventilation, diffusion, perfusion	Effects of ventilation and perfusion on oxygen concentration in arterial blood. Mixing of oxygenated and non-oxygenated blood in lungs, physiologic shunt and impact on pO ₂ . Factors that affect oxygen deliver to tissues. Distribution of pO ₂ from alveoli to tissues.	L: Coupling of ventilation, diffusion, perfusion. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Ventilation, Perfusion, and Ventilation/Perfusion Relationships. - Oxygen and Carbon Dioxide Transport.
Control of respiration	Definition of system for exchange of oxygen and CO ₂ and regulatory centre. Elements of regulatory loop and characteristics, afferent and efferent pathway, receptors, effectors. Respiratory centre and generators of breathing pattern. Characteristics of central and peripheral chemoreceptors and factors that affect them. Mechanoreceptors, other receptors and influence of higher centres on breathing. Ventilation response to pCO ₂ and metabolic hyperbola and regulation of breathing. Factors that affect ventilation response to pCO ₂ and metabolic hyperbola.	L: Control of respiration. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Control of Respiration.
Kidneys and transport of electrolytes in the body		
Link between structure and function	Balance of substances in the body (zero, positive, negative). Structure of a nephron in the view of basic mechanisms – filtration and reabsorption. *Transport of solutes (secretion and reabsorption) along a nephron and relationship with inulin clearance. Microscopic structure of vessels, capillary network and juxtaglomerular apparatus. Characteristics of cortical and juxtaglomerular nephrons. Effects of hormones and nervous system. Distal parts of urinary system (ureter, urinary bladder, urethra), characteristics of urine flow (men, women).	L: Link between structure and function. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Elements of Renal Function.
Renal circulation	Capillary dynamics, factors that affect pressure in glomerular capillary (influence of a. afferens and a. efferens). Autoregulation of blood flow through capillaries (definition with a diagram, role, mechanisms). Blood flow and urine output, anuria. *Distribution of blood flow in different kidney layers. Oxygen consumption in kidneys and its relationship to load on kidneys.	L: Renal circulation. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Elements of Renal Function.
Glomerular filtration	Glomerular filtration (GF), definition and values, characteristics of ultrafiltrate. Renal plasma flow (PPL), estimation with clearance. Capillary filtration (in comparison with systemic capillaries) and filtration fraction. Factors that affect GF (filtration pressure, characteristics of glomerular membrane, PPL, oncotic pressure). Renin-angiotensin-aldosterone system, effects, control of secretion. Regulation of GF and PPL.	L: Glomerular filtration. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Elements of Renal Function.
Kidney function tests, clearance	Basic mechanisms for tubular reabsorption and secretion. Excretion of substances in kidneys and its relationship to filtered	L: Kidney function tests, clearance. T: Berne RM, Levy MN. Physiology or

	<p>load, transport maximum and threshold for excretion, factors that affect it.</p> <p>Definition of clearance, units, measurement.</p> <p>Clearance for substances which are only filtered, totally or partially reabsorbed or secreted.</p> <p>Relationship of clearance to filtered load.</p>	<p>Principles of physiology:</p> <ul style="list-style-type: none"> - Elements of Renal Function.

		Metabolism.
Regulation of metabolism in different physiological conditions	Regulation of metabolism when the intake of nutrients is normal vs. prolonged / without intake of nutrients. Regulation of metabolism during exercise. Regulation of metabolism while growing up. Regulation of metabolism during prolonged exposure to cold.	L: Metabolism of substances and transformation of energy. T: Koren A. Presnova, termoregulacija in prebava (Metabolism, Thermoregulation and Digestion). T: Berne RM, Levy MN. Physiology or Principles of physiology: - Hormonal Regulation of Energy Metabolism.
Organism's basal metabolic rate	Principle of determining basal metabolic rate. Basal conditions and standardization of measured values. Evaluation of measured values.	L: Metabolism of substances and transformation of energy. T: Koren A. Presnova, termoregulacija in prebava (Metabolism, Thermoregulation and Digestion). T: Berne RM, Levy MN. Physiology ali Principles of physiology: - Hormonal Regulation of Energy Metabolism.
Energy balance in organism	Transformation of energy and energy storage in the body. Energy balance and physiological conditions. Diet-induced thermogenesis. Regulation of body mass. Diet and physical exercise.	L: Metabolism of substances and transformation of energy. T: Koren A. Presnova, termoregulacija in prebava (Metabolism, Thermoregulation and Digestion). T: Berne RM, Levy MN. Physiology or Principles of physiology: - Hormonal Regulation of Energy Metabolism.
Regulation of body temperature	Body's mechanisms for thermogenesis and thermolysis. Impact of environment and physiological conditions on regulation of body temperature. Regulation of body temperature. Acclimatisation to heat and cold.	L: Metabolism of substances and transformation of energy. T: Koren A. Presnova, termoregulacija in prebava (Metabolism, Thermoregulation and Digestion). T: Berne RM, Levy MN. Physiology or Principles of physiology: - Hormonal Regulation of Energy Metabolism. - The Autonomic Nervous System and Its Central Control.
Digestion		
Overview of digestive processes	Structural and functional features of digestive tract. Role of enteric and autonomic nervous system in regulation of processes of motility and secretion. Gastrointestinal reflexes. Structural and functional features of processes of digestion and absorption.	T: Johnson LR. Gastrointestinal physiology. T: Koren A. Presnova, termoregulacija in prebava (Metabolism, Thermoregulation and Digestion). T: Berne RM, Levy MN. Physiology or Principles of physiology: - Functional Anatomy and General Principles of Regulation in the Gastrointestinal Tract.
Gastrointestinal motility	Chewing and swallowing, neural control. Gastric motility, neural control.	T: Johnson LR. Gastrointestinal physiology.

	Endocrine, paracrine and neuropeptide regulation of motility. Gastrointestinal reflexes. Haustriations and mass movements.	T: Koren A. Presnova, termoregulacija in prebava (Metabolism, Thermoregulation and Digestion). T: Berne RM, Levy MN. Physiology or Principles of physiology: - Functional Anatomy and General Principles of Regulation in the Gastrointestinal Tract. - The Cephalic, Oral, and Esophageal Phases of the Integrated Response to a Meal. - The Gastric Phase of the Integrated Response to a Meal. - The Small Intestinal Phase of the Integrated Response to a Meal. - The Colonic Phase of the Integrated Response to a Meal.
Salivary secretion	Overview of salivary glands, structural and functional features of salivon. Composition and functions of saliva. Electrolyte transport in salivon. Neural control of salivation.	T: Johnson LR. Gastrointestinal physiology. T: Koren A. Presnova, termoregulacija in prebava (Metabolism, Thermoregulation and Digestion). T: Berne RM, Levy MN. Physiology or Principles of physiology: - The Cephalic, Oral, and Esophageal Phases of the Integrated Response to a Meal.
Secretion, digestion and absorption in stomach	Composition and functions of gastric juice. Mechanism for secretion of acid and enzymes in stomach. Regulation of gastric secretion in different stages. Absorption of nutrients in stomach.	T: Johnson LR. Gastrointestinal physiology. T: Koren A. Presnova, termoregulacija in prebava (Metabolism, Thermoregulation and Digestion). T: Berne RM, Levy MN. Physiology or Principles of physiology: - The Gastric Phase of the Integrated Response to a Meal.
Pancreatic secretion	Composition and functions of pancreatic juice. Stages of pancreatic secretion. Neural and hormonal regulation of secretion. Secretion of bile, composition, regulation of secretion.	T: Johnson LR. Gastrointestinal physiology. T: Koren A. Presnova, termoregulacija in prebava (Metabolism, Thermoregulation and Digestion). T: Berne RM, Levy MN. Physiology or Principles of physiology: - The Small Intestinal Phase of the Integrated Response to a Meal.
Secretion, digestion and absorption in small and large intestine	Secretion in small intestine, regulation of secretion. Digestion in duodenum and small intestine. Absorption of nutrients in small intestine. Digestion and absorption of lipids. Absorption of water and electrolytes in small intestine. Absorption of water and electrolytes in large intestine.	T: Johnson LR. Gastrointestinal physiology. T: Koren A. Presnova, termoregulacija in prebava (Metabolism, Thermoregulation and Digestion). T: Berne RM, Levy MN. Physiology ali Principles of physiology: - The Small Intestinal Phase of the

		Integrated Response to a Meal. - The Colonic Phase of the Integrated Response to a Meal.
Endocrinology		
Endocrine system – principles of function	Types of cell-to-cell communications. Specificities of hormone activity. Neuroendocrine system. Ways of acting of amine, peptide and steroid hormones. Regulation of hormone secretion. Physiological and pharmacological effects of hormones.	Lecture T: Greenspan FS, Strewler GJ. Basic and clinical endocrinology. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Introduction to the Endocrine System.
Neuroendocrinology	Hypothalamo-hypophyseal system. Hormonal feedback loops. Examples of regulatory loops. Neurohypophyseal hormones.	T: Greenspan FS, Strewler GJ. Basic and clinical endocrinology. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Introduction to the Endocrine System. - The Hypothalamus and Pituitary Gland.
Thyroid hormones	Hypothalamic control of thyrotropin (TRH) synthesis. Regulation of thyroid growth and synthesis of hormones (TSH, TSI). Thyroid gland's responsiveness to TSH. Effects of thyroid hormones on basal metabolism and tissue growth.	Lecture T: Greenspan FS, Strewler GJ. Basic and clinical endocrinology. T: Berne RM, Levy MN. Physiology or Principles of physiology: - The Thyroid Gland.
Calcium homeostasis and physiology of bones	Daily Ca^{2+} balance, intake, storage, excretion. Vitamin D metabolism and absorption of Ca^{2+} in GIT. Regulation of plasma concentrations of calcium and phosphate (parathormone, calcitonin). Effects of parathormone and calcitonin on bones, kidneys and digestive system. Role of calcium homeostasis for growth of bones and teeth.	Lecture T: Greenspan FS, Strewler GJ. Basic and clinical endocrinology. T: Berne RM, Levy MN. Physiology or Principles of physiology: - Hormonal Regulation of Calcium and Phosphate Metabolism. - Potassium, Calcium, and Phosphate Homeostasis.
Hormones of adrenal cortex	Mineralocorticoids (regulation of tubular Na^+ reabsorption). Glucocorticoids (effect on metabolism of carbohydrates, proteins and lipids). Cortical androgens. Hypothalamo-hypophyseal regulation of cortisol secretion. Hyper- and hypofunction of adrenal cortex and role of adrenocortical hormones in medicine.	Lecture T: Greenspan FS, Strewler GJ. Basic and clinical endocrinology. T: Berne RM, Levy MN. Physiology or Principles of physiology: - The Adrenal Gland.
Hormones of adrenal medulla	Adrenomedullary hormones (synthesis, regulation of synthesis and release). Physiological and psychological factors that affect catecholamine release. Physiological effects of catecholamines.	Lecture T: Greenspan FS, Strewler GJ. Basic and clinical endocrinology. T: Berne RM, Levy MN. Physiology or Principles of physiology: - The Adrenal Gland.
Gonadal steroids	Testicular hormones. Hormonal regulation of testicular function. Physiological effects of androgens. Ovarian hormones.	Lecture T: Greenspan FS, Strewler GJ. Basic and clinical endocrinology. T: Berne RM, Levy MN. Physiology or

	Hormonal regulation of ovarian cycle, role of hypothalamo-hypophyseal axis in regulation. Placental hormones.	Principles of physiology: - The Male and Female Reproductive Systems.
Physiology of pregnancy/parturition		
Pregnancy	Physiology of conception. Hormonal control of pregnancy (oestrogens, progesterone, hCG, hCS). Physiological role of placenta, amniocentesis. Foetal development during pregnancy.	Lecture T: Greenspan FS, Strewler GJ. Basic and clinical endocrinology. T: Berne RM, Levy MN. Physiology or Principles of physiology: - The Male and Female Reproductive Systems.
Parturition and lactation	Control of beginning of parturition. Factors that regulate uterine contractions. Hypothalamo-hypophyseal control of mammary glands during pregnancy and after parturition. Suckling, milk let-down and control of oxytocin release.	Lecture T: Greenspan FS, Strewler GJ. Basic and clinical endocrinology. T: Berne RM, Levy MN. Physiology or Principles of physiology: - The Male and Female Reproductive Systems.

SUBJECT	SUBJECT DETAILS	LITERATURE
Neuron and synapse		
General features and functions of nervous system	Functions of nervous system. Structure of nervous system. Maturation of nervous system.	Online classroom of the MF. T: Guyton and Hall Textbook of Medical Physiology: - Organization of the Nervous System, Basic Functions of Synapses, and Neurotransmitters.
Membrane potentials	Resting membrane potential. Action potential. Graded, localized potential.	L: Membrane potentials. L: Electrical communication (localized and travelling potentials). T: Berne RM, Levy MN: - Homeostasis - Generation and conduction of action potentials. T: Guyton and Hall Textbook of Medical Physiology: - Membrane Potentials and Action Potentials.
Synaptic transmission	Types of synapses. Chemical synapse – mechanism of function. Neurotransmitters. Neuromuscular junction. Synaptic plasticity.	L: Electrical communication (localized and travelling potentials). T: Berne RM, Levy MN: - Synaptic transmission. T: Guyton and Hall Textbook of Medical Physiology: - Organization of the Nervous System, Basic Functions of Synapses, and Neurotransmitters.
Homeostasis of neural function	Role of blood–brain barrier. Types and roles of glial cells.	L: Electrical communication (localized and travelling potentials).

	Psychophysical photometric units.	- The Eye: III. Central Neurophysiology of Vision.
Transmission of sound to inner ear	Physical features of sound. Problems of sound transmission and systems that enable transmission to inner ear. Air vs. bone conduction of sound.	T: Guyton and Hall Textbook of Medical Physiology: - The Sense of Hearing.
Neurophysiology of hearing	Mechanisms for excitation of hair cells in inner ear. Principles of analysis of sound in auditory system. Principles of tone analysis. Principles of loudness analysis. Principles of sound direction analysis. Principles of analysis of speech. Role of auditory cortex in sound analysis. Physiological principles of hearing aids.	L: Neurophysiology of hearing. T: Guyton and Hall Textbook of Medical Physiology: - The Sense of Hearing.
Psychophysics of hearing	Intensity-frequency field of hearing. Physiological basics of subjective audiometry. Objective audiometry.	L: Psychophysics of hearing. PPC: Hearing. T: Guyton and Hall Textbook of Medical Physiology: - The Sense of Hearing.
Vestibular apparatus	Sensory reception in sacculus, utricle and cristae ampullares. Roles of vestibular apparatus. Control of head position in space, with vision, without vision. Vestibular tests.	T: Guyton and Hall Textbook of Medical Physiology: - Cortical and Brain Stem Control of Motor Function.
Olfaction	Principles of substance differentiation with olfaction. Sensory processes in olfaction, mechanism for coding. Olfactory pathways.	T: Guyton and Hall Textbook of Medical Physiology: - The Chemical Senses-Taste and Smell.
Taste	Principles of substance differentiation with tasting. Sensory processes in tasting, mechanism for coding. Gustatory pathways.	T: Guyton and Hall Textbook of Medical Physiology: - The Chemical Senses-Taste and Smell.
Motor system		
Motor system – overview	Types of movements and their features (reflex, rhythmic, voluntary). Principle of hierarchic structure of motor system. Role of sensory-motor integration in control of movement.	L: Motor system – overview. T: Guyton and Hall Textbook of Medical Physiology: - Organization of the Nervous System, Basic Functions of Synapses, and Neurotransmitters.
Motor role of spinal cord (reflex excitability)	Motor unit. Types of motor units. Basic mechanisms for modulation of force of muscular contraction. General scheme of a reflex, types of reflexes. Myotatic reflex. Inverse myotatic reflex. Role of muscle spindle and gamma motor neurons. Flexion reflexes. Comparison of myotatic reflex and polysynaptic reflexes. Habituation and sensitisation. Physiological basics of EMG. Muscle tone: anti-gravitational, in clinical practice.	L: Motor role of spinal cord (reflex excitability). T: Guyton and Hall Textbook of Medical Physiology: - Motor Functions of the Spinal Cord; the Cord Reflexes.

Descending motor pathways	Types and physiological characteristics of descending motor pathways. Origin and role of lateral motor pathways. Origin and role of medial motor pathways.	L: Descending motor pathways. T: Guyton and Hall Textbook of Medical Physiology: - Cortical and Brain Stem Control of Motor Function.
Motor role of brainstem (control of posture)	Postural reflexes. Motor abilities of decerebrated vs. decorticated animal. Vestibulocollic and vestibulospinal reflexes. Vestibuloocular reflex. Control of rhythmic movements.	L: Motor role of brainstem (control of posture). T: Guyton and Hall Textbook of Medical Physiology: - Cortical and Brain Stem Control of Motor Function.
Cortical control of motor function	Stages of initiation and execution of voluntary movement. Typical cortical areas involved in initiation of voluntary movements. Function of primary motor cortex. Role of premotor and supplementary motor area. Role of parietal association cortex in voluntary movement. Definition of primary cortical efferent areas.	L: Cortical control of motor function. T: Guyton and Hall Textbook of Medical Physiology: - Cortical and Brain Stem Control of Motor Function.
Role of cerebellum	Role of cerebellum.	L: Role of cerebellum. T: Guyton and Hall Textbook of Medical Physiology: - Contribution of the Cerebelum and Basal Ganglia to Overall Motor Control.
Motor functions of basal ganglia	Typical connections of basal ganglia, direct vs indirect pathway. Typical neurotransmitters in basal ganglia. Comparison of motor and sensory connections of basal ganglia and cerebellum. Experimental and clinical proofs of motor functions of basal ganglia.	L: Motor functions of basal ganglia. T: Guyton and Hall Textbook of Medical Physiology: - Contribution of the Cerebelum and Basal Ganglia to Overall Motor Control.
Eye movements	Types and function of eye movements. Scheme of control of eye movements; comparison with general motor scheme.	T: Guyton and Hall Textbook of Medical Physiology: - The Eye: III. Central Neurophysiology of Vision.
Higher neural functions		
Integrative functions of brainstem	Functions of cranial nerves. Functional aspects of reticular formation, modulation of motor and sensory functions and level of consciousness. Typical modulatory neurotransmitter systems that originate from brainstem. Control of qualitative aspect of consciousness; wakefulness, sleep. Stages of sleep. Physiological basis of EEG.	L: Integrative functions of brainstem. T: Guyton and Hall Textbook of Medical Physiology: - Cortical and Brain Stem Control of Motor Function. - State of the Brain Activity-Sleep, Brain Waves, Epilepsy, Psychoses and Dementia.
Neural control of instinctive behaviour	Patterns of homeostatic behaviour and their physiological features (fight-flight-fear, feeding, reproduction). Role of integration of vegetative hormonal and motor functions in behavioural patterns. Functions of hypothalamus in the aspects of major physiological needs, environmental motivational charts and behavioural patterns. Explanation of "reward centre" and addiction. Typical groups of neurons (nuclei) that provide hypothalamic	T: Guyton and Hall Textbook of Medical Physiology: - Behavioral and Motivational Mechanisms of the Brain- The Limbic System and the Hypothalamus. Specialisation of cerebral hemispheres	<p>Which neural functions are lateralised?</p> <p>Transmission of information between hemispheres and ways of observing specialisation of hemispheres.</p> <p>Diagram of transmission of information during voluntary response</p>	<p>L: Specialisation of cerebral hemispheres.</p> <p>T: Guyton and Hall Textbook of Medical Physiology:</p>

	of left or right hand to auditory or written instructions.	<ul style="list-style-type: none"> - Cerebral Cortex, Intellectual Functions of the Brain, Learning and Memory. T: Štrucl M. Fiziologija živčevja (Physiology of the Nervous System): <ul style="list-style-type: none"> - Višje dejavnosti živčevja (Higher Neural Functions).
Physiological basics of memory and learning	Classification of memory and learning on the basis of type of learning, time and content of memory. Types of implicit (non-declarative) memory. Types of explicit (declarative) memory. Physiological basis of memory on a simpler animal model (Aplysia). Physiological model of learning which is based on phenomena of long-term synaptic potentiation (LTP) and long-term synaptic depression (LTD). Role of hypothalamus in learning: proof of space-time map in animal model. Role of temporal lobe in declarative learning: example on model patients. Proofs of cortical plasticity in adult organism.	L: Physiological basics of memory and learning. T: Guyton and Hall Textbook of Medical Physiology: <ul style="list-style-type: none"> - Cerebral Cortex, Intellectual Functions of the Brain, Learning and Memory.

9. Other information

The Pedagogical College of the Institute of Physiology is responsible for questions regarding physiology education.

The official hours of the secretariat of the Institute of Physiology are from Monday to Friday from 9.30 to 10.30.
